

Project

=====

ACM Internal Tooling

Born directly from the former Devops team of ACM, the goal of this project is to answer the long time need for a membership and general club management system in ACM.

Though this project aims to have continued development and added features over the long term, the primary goal for this quarter is to break ground on a member portal and event tracking system.

Future ambitions include making this management system easy to deploy for clubs other than ACM who have a similar need due to their large membership.

Tech stack

- Postgres
- Golang
- React

Current Team

- PM: Kevin Wang
- Senior Backend Dev: Nikhil Kansal
- Senior Frontend Dev: Brandon Liu
- Chief of Design: Justin Liu

Currently Seeking

- One junior frontend dev who has the passion to learn React
