

# Bruin Connections

## About

A dating app for UCLA students. The first version was coded up in a few hours for Valentine's Day. We received 900+ signups and people have continued using it beyond Valentine's Day.

## Objective

While the initial version proved that people were interested in the idea, it was a hack made in a few hours. Our goal with bringing this project to DevX is to build a more polished version, then re-release it as soon as possible (Mid Spring Quarter). We would then continue iterating based on user feedback to give bruins the dating app they want.

## The Tech Stack

- Backend - Node.js because it's the only real dev language
- Frontend - React or TBD by the front end developer. It's not really important which front end tools are used, as long as they get the job done. This will be left to the discretion of our front end developer.

## The Team

Joining this team is not just about skill, but about passion for the project. You must show a genuine interest in dating apps / people / matchmaking.

Our team will be small and quick, consisting of:

- 1 Node.js developer to help me in the backend
- 1 Frontend Developer
- 1 Designer
